

## Trauma Step IKAR

### Product information

The Trauma step is the sensible addition to a fall arrest harness for the safety and health of employees after a fall. It relieves the lower extremities by moving into the adjustable loops thus promoting the possibility of keeping the blood circulation in motion. This precludes a possible early trauma.

- Easily attached to the harness and has a simple and fast zipper style.
- Continuous loop construction with 1.2 m overall length.
- Sold in pairs.

**Marking:** CE-marked
